APPLICATION

FTMSC US, LLC ("FTMSC") hereby applies for such authority as may be required, pursuant to Section 214 of the Communications Act of 1934, as amended (the "Act"), 47 U.S.C. § 214, and Section 63.18(e)(3) of the Commission's Rules, 47 C.F.R. § 63.18(e)(3), to provide Broadband Global Area Network ("BGAN") services to small appropriately-licensed Inmarsat User Terminals ("UTs") (also referred to herein as Mobile Earth Stations ("MESs")) located in the United States, using the Inmarsat 4F2 Satellite ("Inmarsat 4F2") and its Inmarsat "gateway" land earth stations ("LESs") located in Burum, Netherlands, and Fucino, Italy. Inmarsat 4F2 will replace Inmarsat 3, and be located at 52.75° W.L, and serve the same geographic regions as Inmarsat 3, using the same L-band service link frequencies that are authorized for use on Inmarsat 3 under

existing Commission authority.¹ This Application is subject to streamlined processing pursuant to Section 63.12 of the Commission's Rules, 47 C.F.R. § 63.12.

In support of its Application, FTMSC submits the following information.²

Part I of this Application contains background information concerning the Applicant and a description of the proposed services. Part II of this Application contains a public interest demonstration. Part III of this Application contains the information required under Section 63.18 of the Commission's Rules, 47 C.F.R. § 61.18.

I. BACKGROUND

FTMSC, a newly-formed limited liability company, is a wholly-owned subsidiary of France Télécom S.A. ("France Telecom"). France Telecom currently has a number of licensed subsidiaries operating in the United States, including France Telecom Long Distance USA, LLC and Equant U.S., Inc.³

FTMSC seeks to provide BGAN services within the United States. This new service will deliver simultaneous broadband data and voice services. The service is IP based, offering variable data rates up to 492 kbit/s, including fully symmetric services, and the circuit based services include both voice and 64 kbit/s ISDN.

² Concurrently with this application, FTMSC is filing an application for blanket Title III authority to operate the METs in the United States.

³ See In Re International Authorizations Granted, Public Notice, File Nos. ITC-214-19991215-00784, ITC-214-09991215-00782, and ITC-19991215-00783 (rel. Jan 6, 2000).

The Inmarsat 4F2 satellite, licensed in the United Kingdom, will provide in North America and other regions visible from the satellite, using the 1525 – 1559 MHz band for space-to-Earth transmissions and the 1626.5 – 1660.5 MHz band for Earth-to-space transmissions (collectively referred to as "L-band" frequencies). Inmarsat's BGAN service will be provided using newly developed Inmarsat-4 ("I-4") satellites that offer much greater traffic-bearing capacity than the previous generation of Inmarsat satellites and therefore allow for the provision of broadband satellite service. The first of these I-4 satellites was launched on March 11, 2005 to the 64° E.L. orbital location over the Indian Ocean. The second I-4 satellite, which will be used to provide service in the U.S., is scheduled to launch in the fourth quarter of 2005 and will be located at the 52.75° W.L. orbital location. With these two satellites, the BGAN service will cover approximately 85% of the earth's surface. A third Imarsat-4 satellite is under construction. Inmarsat expects that the Imarsat 4F2 satellite will be ready to provide BGAN service in the United States by the first quarter of 2006.

FTMSC proposes to use Inmarsat's existing LES facilities located in Burum, Netherlands and Fucino, Italy together with space segment purchased from Inmarsat to provide services to UTs located in the domestic United States, Puerto Rico, and the U.S. Virgin Islands. FTMSC recognizes the concerns that U.S. law enforcement agencies may have concerning the routing of domestic MSS traffic to outside the US. Accordingly, FTMSC has committed to route all of its U.S. domestic communications traffic (specifically including traffic from its US-Licensed UTs) through a Point-of-Presence ("POP") switch in the US.

Prompt grant of this application is also fully consistent with the pro-competitive licensing criteria established by Congress in the Orbit Act, 47 U.S.C. § 601, et. seq. ("Orbit Act").

II. PUBLIC INTEREST CONSIDERATIONS

Authorizing the proposed services clearly will serve the public interest. First, grant of the instant application will introduce a new service to the mobile satellite services ("MSS") market in the United States. Increased competition and increased alternatives in the MSS market will encourage the development of innovative technologies, will lead to a reduction in rates to end user customers, and will ensure that the full complement of Inmarsat services and connecting alternatives becomes available during this period of economic stress for global communications.

Further, the Commission is authorized to grant the instant Application to operate UTs to provide service in the United States using Inmarsat satellites. The Commission has already determined that Inmarsat has privatized consistent with the Orbit Act,⁴ and that the use of space segment operated by Inmarsat for services to, from, or within the United States will not harm competition in the telecommunications market for the United States.⁵ In the *Stratos Order*, the Commission also found that the provision of the proposed services *via* Inmarsat satellites satisfies the DISCO II public interest considerations.⁶ Thus, grant of the instant Application is in the public interest.

III. SECTION 63.18 INFORMATION

In support of Applicant's request for authorization, the following information is submitted pursuant to Section 63.18 of the Commission's Rules:
